Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

mailroom@bskb.com

	Application No.	Applicant(s)			
Office Action Comments	10/591,801	SAITO, KENICHI			
Office Action Summary	Examiner	Art Unit			
	NGA X. NGUYEN	3662			
The MAILING DATE of this communication app Period for Reply	ears on the cover sheet with the c	orrespondence address			
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

1. Claim 1, 5-6 & 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kaiwa (20020156646) in view of Mattila (2004/0254724).

Kaiwa discloses:

- A communication section that receives from a positioning terminal transmission data and a carrier wave from a positioning SAT signals (see page 3, paragraph 46-48)
- A position computing section that computes a position of the positioning terminal based on the information sending out by a mobile terminal and SAT signals (see page 3, paragraph 47).
- A certificate generating section that generates a document on position information that is obtained by the position computing section (see page 4, paragraph 70)
- Wherein the certificate generating section, upon receipt of a position guarantee request made from a user terminal, certifies the position information by the position computing section (see page 4-5, paragraph 71-77).

Application/Control Number: 10/591,801 Page 3

Art Unit: 3662

Kaiwa does not teach the mobile terminal transmitting encoded data and the server having a decoder to decode the transmitting data. Mattila teaches:

- A communication section that receives from a positioning terminal transmission data including encoded data of a positioning code and a carrier wave from a positioning SAT by using identification code of the positioning terminal (see page 6, paragraph 79-83 and page 8, paragraph 111).
- A decoding section that stores the identification code of the positioning terminal and decodes the transmission data decodes the transmission data by using the identification code (see page 9, paragraph 115).

It would have been obvious to modify Kaiwa by incorporating the teaching of Mattila's system to have a communication section to receive encoded data from mobile terminal and SATs and a decoding section decodes the transmission data and stores the identification code of the positioning terminal so as the server is enable to perform the terminal position with a certification at any place of the terminal traveled.

2. Claim 2-4, 7 & 9-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kaiwa and Mattila as applied to claim 1, 5 & 8 above, and further in view of Troxler (2008/0004798).

With regard to claim 2 & 9, Troxler teaches that the communication section receives position information of a device located at another position and time information, certifies the position information and one of information about the device indicating the another position and the time information (see page 7, paragraph 62).

Art Unit: 3662

It would have been obvious to modify Kaiwa by incorporating the teaching of Kaiwa and Mattila's system and further the teaching of Troxler's system to have a communication section receiving position information at a device located at another position and time information, certifies, and indicating that position and time so as the server is enable to perform the terminal position with a certification at another place and time of the terminal traveled.

With regard to claim 3 & 11, Troxler teaches that the location engaging the DGPS device, RTK, inertial and compass augmentations so that the communication section receives quality information about positioning accuracy from the positioning terminal (see page 5, paragraph 47) which meets the claim.

With regard to claim 4, 7 & 12, Troxler teaches:

- A receiving section that receives a position signal indicating a position of the positioning SAT (see page 10, paragraph 82).
- A signal accumulating section that stores the position signals received by the receiving section (see page 11, paragraph 83).
- Wherein the position computing section judges the transmission data of the
 positioning terminal by using the position signal stored, and computes a position
 of the positioning terminal on determining authenticity of the transmission data
 from the positioning terminal (see page 10, paragraph 78).

With regard to claim 10, Mattila teaches that the server sending out a message to have status codes such as "accepted or service access denied" (see page 11, paragraph 135-137) which meets the claim.
